

# ACRO COVID-19 Antigen Rapid Test

**For Reliable SARS-CoV-2 Detection**

- **ACRO COVID-19** Antigen rapid test detects nucleocapsid (N) protein and Spike (S) protein fragment of SARS-CoV-2, which makes the test highly specific and sensitive in diagnosis of COVID-19.
- Direct Antigen detection from the site of infection helps in early diagnosis of COVID-19 as it plays an important role for virus detection in the early stages of disease. SARS-CoV-2 antigen is generally detectable in upper respiratory specimens during the acute phase of infection.

- **Positive** results indicate the presence of viral antigens, but clinical correlation with patient history and other diagnostic information is necessary to determine infection status.
- **Negative** results should be treated as presumptive and confirmed with a molecular assay, if necessary for patient management.

— Spike (S) protein

— RNA and Nucleocapsid (N) protein

— Envelope (E) protein

## ACRO COVID-19 Antigen Rapid Test Offers:

- ✓ High accuracy :98.6%  
(Sensitivity: 97.7%; Specificity:99%)  
(Results compared with RT-PCR)
- ✓ Fast results in 15 minutes assay time
- ✓ Easy visually interpretation
- ✓ Simple operation, no equipment required
